SurveyCraft Survey Practice Code

When I design and run surveys for clients, I will:

1. **Promise only the confidentiality the settings deliver.**
   I'll check Anonymous Responses and the distribution method before I write a word about anonymity in an invitation.
2. **Protect small groups.**
   I won't filter, crosstab, export or share results for a group below the survey's minimum group size, and I won't help anyone work out who said what.
3. **Ask only what I'll use.**
   Every question maps to the client's objectives. I won't collect identity or demographics "just in case".
4. **Keep test data out of results.**
   I'll delete test responses before launch and never let them into a client's charts or exports.
5. **Give the least access needed.**
   I won't invite a client into a workspace that holds other clients' surveys.
6. **Claim only what the data supports.**
   A pulse shows patterns and associations, not causes. I'll state response rates and limits.
7. **Use bought instruments as designed.**
   A purchased Mosaic survey is one launch. I won't copy or rebuild it to avoid buying another.
8. **Close the loop.**
   I'll encourage every client to share what they learned with the people who answered.
